

112(1) → U-shaped frame portions having two chamfered ends, and a pair of generally L-shaped connectors adapted for a telescopic fit over the chamfered ends of said frame portions to form a rigid generally L-shaped frame, and all of said U-shaped frame portions and L-shaped connectors being Zinc plated for ease of assembly;

131 Cont. → a removable cover formed to fit over the frame and to hold said knockdown frame in assembly, said cover including a top panel section sewn against a bottom panel section, a side panel section sewn therebetween, and a cushion enclosed therebetween, said cover being insertable over said frame and swingable relative to the frame;

C1 whereby said chair may be assembled and positioned on a surface in one of a first position in which the seat portion of the frame rests flat with the backrest portion extending upward to provide a backrest, said cushion extending forwardly from the frame to provide a seat, and a second position said chair being adapted to be overturned from said first position to a second position in which the seat portion of the frame extends upwardly and the backrest portion slopes downwardly with the cushion resting thereon to present a reclining surface.

REMARKS

This amendment is being submitted in response to the final Office Action dated 22 July 2002, the time to respond herein being extended until 22 December 2002. Claims 2 and 6 are herein canceled, and claim 1 is amended. Reconsideration and allowance of this application are respectfully requested.

The Examiner rejected claim 1 under 35 U.S.C. § 102(b) as being anticipated by U.S. Patent No. 4,410,214 to Geschwender, and rejected claims 2 and 6 under 35 U.S.C. § 103(a) as
